Reading

What is the oldest musical instrument ever found? The answer, believe it or not, is the flute. That does not mean that it was exactly the same as the modern versions. Early flutes were made of animal bones with holes drilled into them. The oldest are thought to be some 43,000 years old. These days, they tend to be made of metal. If you are just starting to learn, you will probably use a nickel or brass one. A musician who plays the flute for a living, however, will actually use one that is made of solid silver or gold.

1. If you were just starting to learn the flute, what would it probably be made of?

---

2. Find and copy the word that means someone who plays music for a living.

---

3. Name the **two** metals that your instrument might be made of if you played flute for a living.

a) \_\_\_\_\_

b) \_\_\_\_\_
